d) ☐ disapproved. See explanation below.

e) ☐ entered in part. See explanation below.

The examiner would like to response to the comments on reasons for allowance, and the fact that the opaque marker is not located on the inside of the barrel. The examiner interpreted the ridge being located on the interior of the barrel wall to mean that the ridge was located on the inside of the barrel, and since the open end portion extended from the ridge and the open end portion consisted of the opaque band, that the opaque band must be located on the interior of the barrel wall, thus making the opaque band located on the inside of the barrel.
